

The new reference!

8K Ultra High Speed HDMI™ cable. 16 x sharper than Full HD.
Future-proof and high-resolution as never before.

Have you ever watched Full HD and 4K on two TVs side by side? What an incredible difference! And now 8K is supposed to deliver pictures that are four times as detailed - what's the point?! Quite simply: because the screen diagonals of our televisions are getting bigger and bigger. While in the living room you were still satisfied with 28 inches at the time of tube TV, the standard TV of recent years was at least 40 inches. Currently, 55 to 65 inches are normal and the **trend towards even larger diagonals** is unbroken.

The **new Ultra High Speed HDMI™ cable** from Clicktronic offers future security, because it delivers pin-sharp images up to 8K at 60Hz, for which the previous bandwidths with max. 18 Gbit/s were no longer sufficient. The HDMI™ 2.1 cable allows the data exchange of up to 48 Gbit/s, it supports HDR and is downward compatible at the same time, so that the best possible image is always guaranteed. **Today, tomorrow and the day after tomorrow.**

Clicktronic Casual

Ultra High Speed HDMI™ Cable

High speed cable for 8K@60 Hz

- pure copper conductor and 2-way shielding for clear signal quality
- Ultra High Speed HDMI™ for 3D and ultra-HD up to 8K@60 Hz and 4K@120 Hz
- 48 Gbps bandwidth for uncompressed 8K video (7680 x 4320 p) with HDR
- integrated Ethernet channel saves additional network or audio cables
